Module Name:	Java Project Management
Test Case ID:	IJ_TC_001
Tester Name:	Anil kumar
Test Case Description	To validate the functionality of creating, editing, running, debugging, and managing a Java project in IntelliJ IDEA (JetBrains).
Prerequisites:	IntelliJ IDEA installed, JDK configured, and internet connection available (if required).
Environment Information	OS: Windows 10 System: Laptop

Scenario ID	Scenario	Test Steps	Test Input	Expected Results	Actual Results	Status	Comments
1a	Launch IntelliJ IDEA	Double-click IntelliJ IDEA	-	IDE should launch successfully	IDE launched successfully	Pass	Application startup
1b	Create New Java Project	File → New Project	Java Project	New project should be created	Project created successfully	Pass	Project creation
1c	Open Existing Project	File → Open	Existing Java Project	Project should open	Project opened successfully	Pass	Open project
2a	Create Java Class	Right-click src → New → Java Class	Student.java	Java class created	Class created successfully	Pass	Class creation
2b	Write java code	Enter Java source code	Student.java	Code accepted without errors	Syntax error highlighted	Fail	Missing semicolon detected
3a	Save Source Code	Press Ctrl + S	-	File saved successfully	File saved successfully	Pass	Save operation
3b	Run Java Program	Click Run	Student.java	Program executes successfully	Compilation failed due to syntax error	Fail	Build failed
4a	Correct Syntax Error	Add missing semicolon	Correct Java Code	Program compiles successfully	Program compiled successfully	Pass	Error solved
4b	Verify Console Output	Observe Run Console	-	Output displayed correctly	Output displayed correctly	Pass	Console verification
5a	Debug java program	Click Debug	Student.java	Debugger starts successfully	Debugger started successfully	Pass	Debuging successful
5b	Close Project	File → Close Project	-	Project closes successfully	Project closed successfully	Pass	Close project
6a	Exit IntelliJ IDEA	File → Exit	-	IntelliJ IDEA closes	Application closed successfully	Pass	Exit Application
7a	Create New Java Class	File → New → Java Class → Enter Class Name	student.java	Java class should be created successfully	Java class created successfully	Pass	Class creation verified
8a	Run Java Program with Syntax Error	Remove semicolon and click Run	Invalid Java Code	IDE should show compilation error	Compilation error displayed	Fail	Syntax validation successful
9a	Save Project	File → Save All	Project Files	Project should save without errors	Project saved successfully	Pass	Save functionality verified
10a	Search for a Class	Press Shift + Shift and search "Student"	student	student class should appear in search	No results found	Fail	Search failed due to incorrect file name
11a	Rebuild Project	Build → Rebuild Project	Existing Project	Project should rebuild successfully	Build completed successfully	Pass	Build process verified
